theories of associative learning have a long history in advancing the psychological account of behavior via cognitive representation there are many components and variations of associative theory but at the core is the idea that links or connections between stimuli or responses describe important aspects of our psychological experience this frontiers topic considers how variations in association formation can be used to account for differences between people elaborating the differences between males and females differences over the life span understanding of psychopathologies or even across cultural contexts a recent volume on the application of learning theory to clinical psychology is one example of this emerging application e g hazelgrove hogarth 2012
