the investigation of computational models of argument is a rich and fascinating interdisciplinary research field with two ultimate aims the theoretical goal of understanding argumentation as a cognitive phenomenon by modeling it in computer programs and the practical goal of supporting the development of computer based systems able to engage in argumentation related activities with human users or among themselves the biennial international conferences on computational models of argument comma provide a dedicated forum for the presentation and discussion of the latest advancements in the field and cover both basic research and innovative applications this book presents the proceedings of comma 2020 due to the covid 19 pandemic comma 2020 was held as an online event on the originally scheduled dates of 8 11 september 2020 organised by the university of perugia italy the book includes 28 full papers and 13 short papers selected from a total of 78 submissions the abstracts of 3 invited talks and 13 demonstration abstracts the interdisciplinary nature of the field is reflected and contributions cover both theory and practice theoretical contributions include new formal models the study of formal or computational properties of models designs for implemented systems and

experimental research practical papers include applications to medicine law and criminal investigation chatbots and online product reviews the argument mining trend from previous comma s is continued while an emerging trend this year is the use of argumentation for explainable ai the book provided an overview of the latest work on computational models of argument and will be of interest to all those working in the field

according to the traditional view meaning presents itself under the form of some kind of identity to give the meaning of a sentence amounts to being capable of producing some substitute based on the identity of the terms of the sentence is then the meaning of a book or of any text the capacity of rewriting it instead of retaining a double standard theory of meaning one for sentences and another for texts that would allow for an ad hoc gap the author provides a unified conception called the question view of language he has developed known as problematology he pursues a systematic analysis of questioning in literature and shows how questioning makes the understanding process possible

argumentation has traditionally been studied across a number of fields notably philosophy cognitive science linguistics and jurisprudence the study of computational models of argumentation is a more recent endeavor bringing together researchers from traditional fields and computer science and engineering within a rich interdisciplinary matrix computational models of argumentation have been identified and used since the 1980s and more recently an important role for argumentation in leading to principled decisions has emerged in several settings this book presents the proceedings of comma 2022 the 9th international conference on computational models of argument held in cardiff wales united kingdom during 14 16 september 2022 the book contains 27 regular papers and 16 demo papers from a total of 75 submissions as well as 3 invited talks from prof paul dunne university of liverpool prof iryna gurevych tu darmstadt and prof antonis kakas university of

Cyprus which reflect the diverse nature of the field papers are a mix of theoretical and practical contributions. Theoretical contributions include new formal models, the study of formal or computational properties of models, design for implemented systems, and experimental research. Practical papers include applications to law, machine learning, and explainability. Abstract and structured accounts of argumentation are covered, as are relations between different accounts. Many papers focus on the evaluation of arguments or their conclusions given a body of arguments, with a continuation of a recent trend to study gradual or probabilistic notions of evaluation. The book offers an overview of recent and current research and will be of interest to all those working with computational models of argumentation.

The principles of practical reasoning integrated into real world applications is the basic premise behind professors Richard D. Rieke and Malcolm O. Sillars' fourth edition of *Argumentation and Critical Decision Making*. The most current theories and research are combined with classic rhetoric to effectively explain the necessary functions of decision making in any given situation, with an increased emphasis on critical thinking. Rieke and Sillars help connect critical decisions with audience values and conventions. Real life examples are used to illuminate the principles of argumentation, ranging from interpersonal discussions to formalized conventions of science and law. A new discussion of language and argumentation highlights language practices that have had the most impact on effective argumentation.
