throughout this unprecedented crisis which is hitting all major economies in the eu the escalation of the eurozone recession increasingly undermines public

confidence in the ability of competitive markets to deliver positive outcomes a debate on the most appropriate way to enforce competition rules in light of the crisis is definitely useful a relaxed stance to competition during difficult periods may be tempting and indeed this has often been the approach used in the past however the enforcement of competition rules is no less important during times of crisis than during normal periods it has also been argued that when public resources are stretched to the limit and businesses are struggling to survive competition authorities should seek to focus their limited resources on those anticompetitive practices which are most detrimental to consumer welfare such as cartels indeed if over enforcement is perhaps undesirable when the economy is functioning well it will inevitably become more problematic during an economic downturn in addition business managers may be increasingly tempted to resort to anticompetitive practices when faced with economic hardship this book will appeal to judges and lawyers in competition law european law business corporate law and insolvency law the study of european competition law european institutions national competition authorities and companies

neglect is one of the most impressive neuropsychological disorder for both its theoretical and clinical relevance besides being very common and disabling it is highly informative for understanding normal cognitive functioning the hallmark of neglect is the failure to attend to the contralesional hemispace however several studies have recently highlighted that additional deficits not attributable to a spatial bias are associated to the impaired contralesional hemispace processing moreover manifestations of neglect tend to be particularly heterogeneous and often dissociate according to the spatial domain being investigated e g body space space within reaching space beyond reaching imaginal space heterogeneity in neglect patients also means that dissociations across different tasks in a single patient are more the rule than the exception evidence suggests that some of these dissociations can be readily explained by taking into account the amount of available attentional resources as a major determinant for the presence and the severity of neglect there is no doubt that neglect patients provide a wealth of information about the functioning of systems subserving attentional orienting and spatial processing moreover

their performance also show that some non spatial deficits are tightly coupled with more classic contralesional spatial deficits it seems however still unclear to what extent these non spatial deficits are an intrinsic characteristic of neglect or whether they are to be considered unspecific effects of the often massive brain lesions suffered by the patients from the clinical point of view neglect is a disorder that dramatically affects patients and their caregivers because it severely limits the individuals autonomy and motor recovery after brain damage for these reasons neglect is a disorder that is worth rehabilitating to be effective neglect rehabilitation should be based on the knowledge of what cognitive aspects are impaired and it should be focused on improving daily life performance for these reasons it is also important to detect and quantify subtle forms of neglect
