field emission cathodes are being considered to replace hollow cathodes in Hall and ion thrusters because they do not require propellant and operate cold unlike hollow cathodes in addition to higher operating efficiency these cathodes have much smaller dimensions therefore they can be used with meso and microscale propulsion systems field emission array (FEA) cathodes are typically used in flat panel display applications in a close spaced triode configuration where pressures are 10^{-7} torr the environment of a Hall thruster is much more hostile with xenon pressures of 105 torr plasma ions and a plasma virtual anode to collect the emitted electron current in this environment ions bombarding the cathode will damage them to shorten their lifetime and affect their performance and the current emitted from the cathode will be space charge limited to possibly prohibitively small currents
