the authors give an adelic treatment of the kuznetsov trace formula as a relative trace formula on  $\mathrm{GL}_2$  over  $\mathbf{q}$  the result is a variant which incorporates a hecke eigenvalue in addition to two fourier coefficients on the spectral side the authors include a proof of a weil bound for the generalized twisted kloosterman sums which arise on the geometric side as an application they show that the hecke eigenvalues of maass forms at a fixed prime when weighted as in the kuznetsov formula become equidistributed relative to the sato tate measure in the limit as the level goes to infinity

this book is an outgrowth of the workshop on regulators in analysis geom etry and number theory held at the edmund landau center for research in mathematical analysis of the hebrew university of jerusalem in 1996 during the preparation and the holding of the workshop we were greatly helped by the director of the landau center lior tsafiriri during the time of the planning of the conference and hershel farkas during the meeting itself organizing and running this workshop was a true pleasure thanks to the expert technical help provided by the landau center in general and by its secretary simcha kojman in particular we would like to express our hearty thanks to all of them however the articles assembled in the present volume do not represent the proceedings of this workshop neither could all contributors to the book make it to the meeting nor do the contributions herein necessarily reflect talks given in jerusalem in the introduction we outline our view of the theory to which this volume intends to contribute the crucial objective of the present volume is to bring together concepts methods and results from analysis differential as well as algebraic geometry and number theory in order to work towards a deeper and more comprehensive understanding of regulators and secondary invariants our thanks go to all the participants of the workshop and authors of this volume may the readers of this book enjoy and profit from the combination of mathematical ideas here documented
