Gabe Brown didn't set out to change the world when he first started working alongside his father-in-law on the family farm in North Dakota. But as a series of weather-related crop disasters put Brown and his wife Shelly in desperate financial straits, they started making bold changes to their farm. Brown, in an effort to simply survive, began experimenting with new practices he'd learned about from reading and talking with innovative researchers and ranchers. As he and his family struggled to keep the farm viable, they found themselves on an amazing journey into a new type of farming: regenerative agriculture. Brown dropped the use of most of the herbicides, insecticides, and synthetic fertilizers that are a standard part of conventional agriculture. He switched to no-till planting, started planting diverse cover crops, mixes, and changed his grazing practices. In so doing, Brown transformed a degraded farm ecosystem into one full of life, starting with the soil and working his way up, one plant and one animal at a time. In *Dirt to Soil*, Gabe Brown tells the story of that amazing journey and offers a wealth of innovative solutions to our most pressing and complex contemporary agricultural challenge: restoring the soil. The Brown's Ranch model, developed over twenty years of experimentation and refinement, focuses on regenerating resources by continuously enhancing the living biology in the soil using regenerative agricultural principles. Brown's Ranch has grown several inches of new topsoil in only twenty years. The 5,000-acre ranch profitably produces a wide variety of cash crops and cover crops, as well as grass-finished beef and lamb, pastured laying hens, broilers, and pastured pork, all marketed directly to consumers. The key is how we think, Brown says. In the industrial agricultural model, all thoughts are focused on killing things, but that mindset was also killing diversity, soil, and profit. Brown realized now he channels his creative thinking toward how he can get more life on the land: more plants, animals, and beneficial insects. The greatest roadblock to solving a problem, Brown says, is the human mind.

The New Jersey Forest Fire Service was established by the state legislature in 1906. During the past century, the New Jersey Forest Fire Service has evolved from a system of township firewardens who relied on horses, wagons, shovels, and pine boughs to a team of highly trained and experienced firefighters supported by a modern fleet of vehicles, aircraft, and state-of-the-art technology to assist in the annual battle against wildfires. Each year, New Jersey experiences over 1,600 wildfires that can range in size from less than one acre to more than several thousand acres. Since 1906, forest firewardens and firefighters have battled these wildfires and utilized fire as a public safety tool to protect lives, property, and New Jersey's natural resources.
