what is meiosis it is a specialized form of cell division process in which a single cell divided twice to form four daughter cells that possess exactly half the number of chromosomes of the parent cell

meiosis is a reduction division because the end result of this special type of cell division is four haploid cells the first meiotic division occurs which results in two cells each with 46 chromosomes then

if  $2n = 4$  then identify the figures a b and c as per the following codes and select the correct option  
anaphase of meiosis i i  
anaphase of mitosis ii  
anaphase of meiosis II iii

during anaphase i stage of meiosis the cell starts to lengthen the two homologs of each chromosome pair separate and move toward opposite poles drawn by the microtubules of the spindle apparatus

meiosis results in formation of four daughter cells from a single parent cell and each of the daughter cell will have half of the genetic materials as of that in the parent cell

meiosis is the process by which sexually reproducing organisms make their sex cells sperm and eggs during meiosis a specialized cell called a germ cell splits to make four new sex cells each with half

during anaphase i the homologous chromosomes separate while the chromatids remain attached at their centromeres hence in anaphase i the chromosomes of each bivalent pair separate while the

meiosis is called reductional division because number of chromosomes and amount of dna in daughter cells is reduced to half than that of parent cell in meiosis diploid number of chromosomes is reduced

meiosis is a special type of cell division a process where a single cell divides two times to produce four haploid cells each not only containing half the original amount of genetic information but also

1 plasmogamy combination of cellular material between motile and nonmotile gametes  
2 karyogamy combination of two cores  
3 meiosis zygote to haploid spores thus the correct
