this encyclopaedia of mathematics aims to be a reference work for all parts of mathematics it is a translation with updates and editorial comments of the soviet mathematical encyclopaedia published by soviet encyclopaedia publishing house in five volumes in 1977 1985 the annotated translation consists of ten volumes including a special index volume there are three kinds of articles in this encyclopaedia first of all there are survey type articles dealing with the various main directions in mathematics where a rather fine subdivision has been used the main requirement for these articles has been that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible on the whole

these articles should be understandable to mathematics students in their first specialization years to graduates from other mathematical areas and depending on the specific subject to specialists in other domains of science engineers and teachers of mathematics these articles treat their material at a fairly general level and aim to give an idea of the kind of problems techniques and concepts involved in the area in question they also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions the second kind of article of medium length contains more detailed concrete problems results and techniques

the book is devoted to the study of the geometrical and topological structure of gauge theories it consists of the following three building blocks geometry and topology of fibre bundles clifford algebras spin structures and dirac operators gauge theory written in the style of a mathematical textbook it combines a comprehensive presentation of the mathematical foundations with a discussion of a variety of advanced topics in gauge theory the first building block includes a number of specific topics like invariant connections universal connections h structures and the postnikov approximation of classifying spaces given the great importance of dirac operators in gauge theory a complete proof of the atiyah singer index theorem is presented the gauge theory part contains the study of yang mills equations including the theory of instantons and the classical stability analysis the discussion of various models with matter fields including magnetic monopoles the seiberg witten model and dimensional reduction and the investigation of the structure of the gauge orbit space the final chapter is devoted to elements of quantum gauge theory including the discussion of the gribov problem anomalies and the implementation of the non generic gauge orbit strata in the framework of hamiltonian lattice gauge theory the

book is addressed both to physicists and mathematicians it is intended to be accessible to students starting from a graduate level
